O Trudesign ventilima:

TruDizajn kuglični ventili su dizajnirani i izrađeni u Novom Zelandu za uporabu u morskim aplikacijama iznad i ispod vodene linije. Odobreni su prema IMCI & Bureau Veritas ISO standardu 9093-2 i idealni su za kontrolu ulaza i izlaza vode.

Tijela tih ventila su profilirani u čaši ojačana najlon kompozitnim materijalom koji omogućuje vrlo veliku čvrstoću i otpornost na udarce, što rezultira laganom jedinicom, apsolutno oslobođenom od korozije i elektrolize. Unutarnji dijelovi su uliveni u teflonom poboljšanim polimerom za vrlo glatki rad, koji također osigurava kontinuirani i glatki rad tijekom mnogih godina.

Imajte na umu da se ručica može vrlo lako ukloniti sa ventila svih veličina u koliko je potrebno zbog instalacije.

Glavne karakteristike:

- Proizvedeni od stakla ojačanim najlonskim kompozitom - Vrlo visoka čvrstoća i mala težina
- Kompletan otporan na koroziju i elektrolizu - Vrlo dug vijek trajanja bez ikakve zabrinutosti za smanjene performanse od korozije
- Otporne na kemikalije - otporan za dizela, benzina i antivegetativne boje
- UV otporan - neće popucati od ultraljubičastog zračenja i neće promijeniti boju od sunca
- Veliki raspon radne temperature (-20 ° C do 80 ° C)
- Visoka kvaliteta završne obrade - Neće promijeniti boju niti nakon više godina upotrebe kao što je slučaj sa npr. mesing ventilima koji pozelenje
- Ventili su izrađeni prema standardima odobrenim kroz IMCI & Bureau Veritas certifikate prema ISO standardu 9093-2
